

Connect a Windows 8.1 or 10 laptop to a TV wirelessly

Miracast is a piece of software included in Windows 8.1 and 10 which allows your laptop screen to be displayed on a compatible TV screen. To check if your TV is compatible, head to your TV's network settings and look for a screen mirroring option. If you have this option, turn screen mirroring on.

How to stream – Windows 10:

Step 1: On your laptop right click the bottom right corner of your screen and select Open action centre. In the action centre, select the box labelled Connect.

Step 2: The laptop will search for wireless displays. Look for a display that matches the brand and model number of your TV – select the correct TV option. If this doesn't work, you may need to check that Bluetooth is switched on – this can be found in device settings on your laptop.

Step 3: Once you have selected the correct TV option, your laptop's screen will now be mirrored to the TV.

How to stream – Windows 8.1:

Step 1: On your laptop, go into your Settings and select Devices.

Step 2: In the Devices screen select Project.

Step 3: Next select the Add Wireless Display option. Your laptop will now search for compatible devices. Look for a display that matches the brand and model number of your TV.

Step 4: Once you have selected the correct TV option, your laptop's screen will now be mirrored to the TV.
